SUMMARY

Detail-oriented **Software Engineer** with a strong foundation in automation and infrastructure. Currently specializing in **Cloud & DevOps** through a rigorous "100 Days of DevOps" challenge. Proficient in **Python, Bash, and Linux**, with hands-on experience in **Docker, Kubernetes, and AWS**. Passionate about building automated, scalable systems and streamlining CI/CD workflows to enhance deployment efficiency.

EDUCATION

V.N.R VJiet College

Bachelor of Technology, Electronics and Communication Engineering

Hyderabad, Telangana, IN

2020 – 2024

EXPERIENCE

MultiCloud Engineer, Cognizant

May 2025 – Present

- Collaborate within agile teams to deliver high-quality software solutions and maintain application stability.
- Collaborated with senior engineers to understand DevOps workflows and cloud-native architecture.
- Assisted in maintaining GitHub Actions pipelines, troubleshooting errors, and automating minor deployment tasks.
- Leverage **Bash and Python scripting** to automate repetitive tasks, improving internal workflow efficiency.

PROJECTS

Automated Cloud Resource Tracker | *GitHub*

January 2026 – January

- Engineered a **Bash-based automation tool** that audits AWS resources (EC2, S3, Lambda, IAM) using the AWS CLI.
- Integrated **Local Stack** to simulate a cloud environment for testing, ensuring cost-effective development without AWS Free Tier overhead.
- Implemented automated reporting via **Cron jobs**, delivering resource snapshots in structured text/JSON formats.

100 Days of DevOps Challenge | *GitHub*

January 2025 – Present

- Consistently documenting a 100-day technical journey covering Linux administration, containerization, and cloud architecture.
- Building and deploying mini-projects daily involving **Docker** networking, **Kubernetes** pod management, and **Ansible** playbooks.
- Sharing technical insights and documentation on LinkedIn and X to contribute to the DevOps community.

TECHNICAL SKILLS

DevOps Tools: Git/GitHub, GitHub Actions, Docker, Jenkins, Ansible (Specializing), Terraform (Learning), Kubernetes (K8s), Helm (Learning)

Languages: Python, JavaScript

Scripting: Python, Bash, YAML **Cloud:** AWS (EC2, S3, IAM, VPC), Local Stack (Cloud Mocking).

Monitoring & Observability: Prometheus & Grafana (Learning Path), AWS CloudWatch (Learning).

Operating Systems: Linux (Debian, RPM), Windows Server
